

LED TASK LIGHTS

LED Light	Suggested Shelf Size*	LED's Per Light	Wattage Per Light
6" (SRD6)	< 24"	3	5.8
19" (SRD19)	24" - 36"	6	10.9
37" (SRD37)	42" - 72"	12	21.9

*See Product Offering Catalogs for specific details.

LOW-PROFILE LIGHTING

For a truly bright idea, look no further than our LED task lights. The lights can be mounted beneath overheads and shelves like their traditional fluorescent counterparts, but they consume half the energy and provide a warm-toned, more natural light.

Available in 6", 19", and 37" lengths, a single light can be sufficient to illuminate shelves up to 72" long. For larger spaces, multiple lights can be interconnected and fed by a single 60-Watt power supply. Because the power use of the task lights varies with their length, two of the 37" fixtures or up to nine of the 6" fixtures can be coupled together.

While these low profile task lights may be low on energy consumption, they are big on features. Magnetic and screw mounting options are available making installation on metal overheads or wooden casegoods equally easy. One-button operation makes using the lights a snap as well. To activate the dimming feature, just hold down the on/off switch and release it when the desired level is reached. The most clever and energy-saving feature of the task light is its optional sensor that automatically turns the light on to the preset level when it detects the presence of an occupant.

Up to nine lights can be interconnected and fed by a single power supply.

End caps provide cord management when lights are mounted beneath casegoods.

Holding the on/off switch activates the dimmer. Releasing the switch sets it at the desired level.

LED task lights are just as bright as their fluorescent counterparts, but consume half the energy.
