Component Product Title: **24' Electrical Topfeed Harness**  
Effective: **10/5/2007** ECN: # 10918

Description of New Product: A 24' (288") Topfeed harness has been added to the offering for Sys XXI/Classic XXI/Sys 3000 8-wire and 10-wire electrical systems and the PowerWorks/Crescendo/WireWorks 10-wire electrical systems. These 24' harnesses are in addition to the 12' & 18' that were already available. A separate Communications pole must be ordered along with the harness.

Reason for New Product: Specials were occasionally written asking for harnesses longer than 18' when extra conduit was required above a ceiling to reach an electrical J-box. Please note that 24' is the longest size allowable by UL.  
The conduit can be cut to a shorter length in the field if required.

Action Required: Encompass CAD™ has been programmed to allow the placement of the 12', 18' & 24' harnesses as well as the communication pole. The location is in the "Elec" pulldown menu and all sizes are listed for the appropriate panel system after the "Elec Harness" pick.
