

1000 Series® Seating ■

Good seat. Great value.

- Versatile
- Comfortable
- Economical

■ **1000 reasons to specify.**

Cool for school.

1000 Series seating is perfect for any classroom setting. Add a tablet arm in right- or left-handed versions in a wide variety of laminates. Combine that with the poly colors, frame finishes and upholstery options, and you can match any school's aesthetic needs.

Sturdy interlocking steel loops are welded to the leg frame of the 1060-G for ganging under the seat.

Ganging on the 1000-G uses a "keyhole" system. The steel knob on the crossbrace locks into the slot of the adjacent chair.

The 1000 model features a fixed bookrack constructed of sturdy steel rods. Chairs are nonstacking with bookrack attachment.

The optional bookrack for the 1060 and other square leg styles also features steel rod construction and prohibits stackability.

Plastic glides are featured on square-leg models and self-leveling glides on round-leg models.

1000 Series® Seating

No-nonsense seating for everything from classrooms to conference rooms to convention centers. 1000 Series seating offers simplistic lines and a rolled edge for long-lasting comfort and strength.

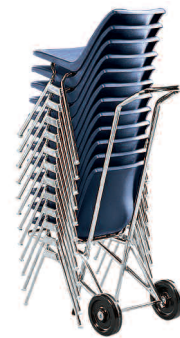

Specify to fit any space.

Stacking or non-stacking (tablet arm) versions are available with either round or square legs in chrome or powdercoat paint finish. Sturdy injection-molded polypropylene shells can be specified in a multitude of colors to match your specification. Optional fabric or vinyl upholstery is available for seat or seat and backrest cushions.

Clean sweep.

The polypropylene shell features a textured finish, which cleans easily with a damp cloth. And, the color permeates the shell to disguise nicks and scratches.

When it's time to clear the room, a well-designed dolly or hand truck easily transports a stack of 12 chairs.
